

Our company produces and sells dry sunflower lecithin. Sunflower lecithin differs from soya bean lecithin:

**GMO-free**

**Potential allergens free (for more information visit [www.cfsan.fda.gov](http://www.cfsan.fda.gov))**

**Fito-Estrogen free**

This gives you the key advantage in the market.

We offer the following services:

- encapsulating in hard gelatin capsules (desired color and size) of any producer;
- tableting;
- blister packing;
- canning.

**The product can be manufactured under your trade mark and with your label.**

Many producers prefer polymer cans or cases. This choice has its reason. The material of such package is harmless, which is warranted by certificates, and durable. The lid makes the package hermetic and has temper evident. According to price-quality ratio the case is the most cost-effective.

Please, see: <http://www.crystalglass.com.ua/eng/products/medicine/plastic/containers/>

We ensure accurate, correct packaging of tablets and capsules as well as closure, labeling with stick labels, cartooning of the product with instruction and putting into corrugated packaging.

We'll consider any inquiry or proposal.

Soon we plan to launch the production of granulated sunflower lecithin.
